

SARS-CoV-2 Variants of Concern Circulating in Imperial County

What is a Variant?

Multiple variants of the virus that causes COVID-19 have been identified globally during the COVID-19 pandemic. Variants are determined by their genetic sequences. It's important to understand that genetic mutations of the virus that causes COVID-19, SARS-CoV-2, are expected, and that there are many strains of the virus. Public health, academic, and clinical partners are working together to sequence the genetic material of the virus in California.

SARS-CoV-2 Variant Classifications

Variant classifications have been updated per the U.S. government SARS-CoV-2 Interagency Group variant classification scheme. If a variant is considered more contagious or likely to cause greater illness or severe disease, or may impact treatment or vaccine response, then it is considered a **variant of concern**. The Omicron Variant (B.1.1.529 and BA lineages) is currently the only variant of concern. An increase in the number of cases could strain health-care resources, and lead to more hospitalizations and deaths. Omicron (B.1.1.529) was designated as a Variant of Concern by the World Health Organization on November 26, 2021. California's first case of Omicron variant was identified in early December 2021 and in Imperial County in late December 2021.

| VARIANTS OF CONCERN | | |
|---------------------|-----------|-------|
| WHO* LABEL | LINEAGE | CASES |
| Omicron | B.1.1.529 | 2,647 |

* World Health Organization

| VARIANTS OF CONCERN BY AGE RANGE | |
|----------------------------------|--------------|
| 0-17 | 410 |
| 18-49 | 1,614 |
| 50-64 | 426 |
| 65+ | 197 |
| Total | 2,647 |

| VARIANTS OF CONCERN BY CITY | |
|-----------------------------|--------------|
| Brawley | 344 |
| Calexico | 400 |
| Calipatria | 38 |
| El Centro | 479 |
| Heber | 88 |
| Holtville | 51 |
| Imperial | 290 |
| Niland | 13 |
| Ocotillo | 1 |
| Seeley | 13 |
| Thermal | 43 |
| Westmorland | 15 |
| Winterhaven | 3 |
| Out of County | 205 |
| Out of Country | 664 |
| Total | 2,647 |

From December 2021 to March 2023, a total of 2,647 SARS-CoV-2 Variants of Concern have been identified. The age group most affected is 18-49 years.

VARIANTS BEING MONITORED

| WHO* LABEL | VARIANT | CASES |
|--------------|---------------------------|--------------|
| Alpha | B.1.1.7 | 110 |
| Beta | B.1.351 | 1 |
| Delta | B.1.617.2 and AY lineages | 1,281 |
| Gamma | P.1 | 169 |
| Epsilon | B.1.427 and B.1.429 | 123 |
| Iota | B.1.526 | 10 |
| Mu | B.1.621 | 26 |
| Total | | 1,720 |

*World Health Organization

From November 2020 to January 2022, a total of 1,720 SARS-CoV-2 Variants Being Monitored have been identified. The predominant Variant Being Monitored is Delta (B.1.617.2 and all AY lineages) The most affected age group is 18-49 years old.

SARS-CoV-2 Variant Classifications

The term **variants being monitored** is used to describe a variant for which there are data indicating a potential or clear impact on treatment or that has been associated with more severe disease or increased transmission but are no longer detected or are circulating at very low levels, and as such, do not pose a significant and imminent risk to public.

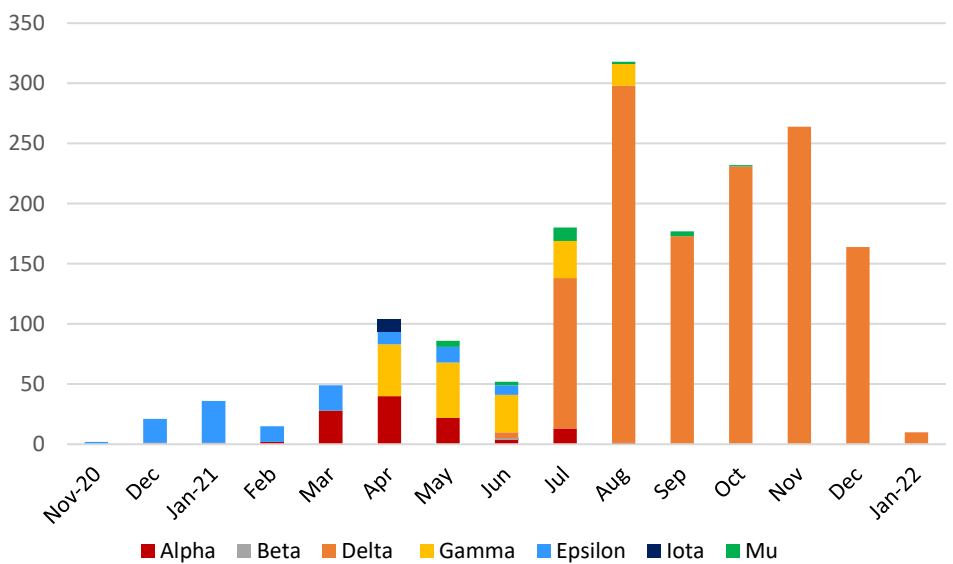

VARIANTS BEING MONITORED BY AGE RANGE

| | |
|--------------|--------------|
| 0-17 | 408 |
| 18-49 | 947 |
| 50-64 | 262 |
| 65+ | 103 |
| Total | 1,720 |
