</table>

Positivity rate in Imperial County

- **10.6% test positivity (7-day rate)**
- **2.9% increase from 7-days prior**

COVID-19 hospitalized patients in Imperial County

- **39 COVID-19 hospitalized patients**
- 3 more patients hospitalized from prior day total (8.3% increase)

Additional State Resources Deployed
Unvaccinated and vaccinated data
https://covid19.ca.gov/state-dashboard/

Vaccines prevent serious illness, save lives, and reduce further spread of COVID-19. As more people are vaccinated, the virus is less likely to spread, mutate, and potentially become even more dangerous. Vaccines will help put an end to the pandemic.

From October 31, 2021 to November 6, 2021, unvaccinated people were 6.9 times more likely to get COVID-19 than fully vaccinated people.
Unvaccinated and vaccinated data

https://covid19.ca.gov/state-dashboard/

Vaccines prevent serious illness, save lives, and reduce further spread of COVID-19. As more people are vaccinated, the virus is less likely to spread, mutate, and potentially become even more dangerous. Vaccination will help put an end to the pandemic.

From October 24, 2021 to October 30, 2021, unvaccinated people were 11.9 times more likely to be hospitalized with COVID-19 than fully vaccinated people.
Unvaccinated and vaccinated data

https://covid19.ca.gov/state-dashboard/

Vaccines prevent serious illness, save lives, and reduce further spread of COVID-19. As more people are vaccinated, the virus is less likely to spread, mutate, and potentially become even more dangerous. Vaccines will help put an end to the pandemic.

From October 17, 2021 to October 23, 2021, unvaccinated people were **16.5 times more likely** to die from COVID-19 than fully vaccinated people.
COVID-19 Vaccination

https://covid19.ca.gov/vaccination-progress-data/

- Eligible population: 5 years of age & older
- 292,220 doses administered in Imperial County
- 74.1% fully vaccinated (131,631 individuals)
- 16.9% partially vaccinated (30,052 individuals)
COVID-19 Booster/Additional Dose

Booster shots are now available for everyone 18 and older.
• If you got a Pfizer or Moderna vaccine and feel you’re at risk, get a booster shot after 6 months
• If you got a Johnson & Johnson vaccine, get a booster shot after 2 months
• Your booster shot can be a different vaccine brand than you received before, as long as you completed your original vaccination series (one dose of Johnson & Johnson or two doses of Pfizer or Moderna).

Booster facts and Booster questions and answers

Additional doses of Pfizer or Moderna COVID-19 vaccines are now available for those with moderately to severely compromised immune systems. This includes people who:
• Get active cancer treatment for tumors or cancers of the blood
• Got an organ transplant and are taking medicine to suppress the immune system
• Got a stem cell transplant within the last 2 years or are taking medicine to suppress the immune system
• Have moderate or severe primary immunodeficiency (such as DiGeorge syndrome, Wiskott-Aldrich syndrome)
• Have advanced or untreated HIV infection
• Get active treatment with high-dose corticosteroids or other drugs that suppress immune response

Questions and answers about additional doses

What You Need to Know

• Everyone ages 5 and older can get vaccinated against COVID-19. Learn how to find a COVID-19 vaccine.

• COVID-19 vaccines are effective at helping protect against severe disease and death from the virus that causes COVID-19, including known variants currently circulating (e.g., Delta variant).

• The benefits of COVID-19 vaccination outweigh the known and potential risks, which are rare.

• As with other routine vaccines, side effects may occur after vaccination. These are normal and should go away within a few days.

• People who are fully vaccinated can resume many activities they did before the pandemic. However, people should wear a mask indoors in public if they are in an area of substantial or high transmission.

• People who are moderately to severely immunocompromised are recommended to get an additional primary dose of an mRNA COVID-19 vaccine (i.e., Pfizer-BioNTech or Moderna).

• Certain groups of people are recommended to get a COVID-19 booster shot.

• Unlike many medications, COVID-19 vaccine dosage does not vary by patient weight but by age on the day of vaccination.

• People can get a COVID-19 vaccine and other vaccines, including flu vaccine, at the same time.
Frequently Asked Questions about COVID-19 Vaccination

Updated Nov 5, 2021  Language:  Print

NOTICE: CDC now recommends that children between the ages of 5 and 11 years receive the Pfizer-BioNTech pediatric COVID-19 Vaccine. Learn more about vaccines for children and teens.

- Below are answers to commonly asked questions about COVID-19 vaccination.

Safety

Are COVID-19 vaccines safe even though the vaccines were developed rapidly?

What are the ingredients in COVID-19 vaccines?

If I am pregnant or planning to become pregnant, can I get a COVID-19 vaccine?

Why should my child get vaccinated against COVID-19?
About the COVID-19 Vaccine: Frequently Asked Questions

The COVID-19 vaccine is our best hope for ending the current pandemic. While the goal will be to administer vaccine to as many people as possible, as quickly as possible, vaccine supply will be limited initially. As a new vaccine, there are many questions that pediatricians and patients/families have. Below are answers to some of the most common questions.

Please note that this information will be updated regularly as data about COVID-19 vaccine becomes available.

New FAQs

Q: Can I administer a COVID-19 vaccine to a patient who is currently sick with COVID-19?

A: COVID-19 vaccination should be deferred for patients with a current SARS-CoV-2 infection until they recover from their acute illness and the criteria to discontinue isolation has been met. Patients who are asymptomatic should receive COVID-19 vaccine following their recommended isolation period. This also applies to people who become infected with COVID-19 between their first and second dose of vaccine.

Q: Now that 2 different formulations of Pfizer-BioNTech COVID-19 vaccine are available, what do I do if the wrong product or dose is given to a child or adolescent?

A: The CDC Interim Clinical Considerations (Appendix A) includes a table that outlines interim recommendations for COVID-19 vaccine.
